- Android Device 2.3 + higher
- Enable Unknown Sources
- Default Internet Browser

Note: Device must be 'rooted' in order to use all zANTI features.

Security Settings Disclosure

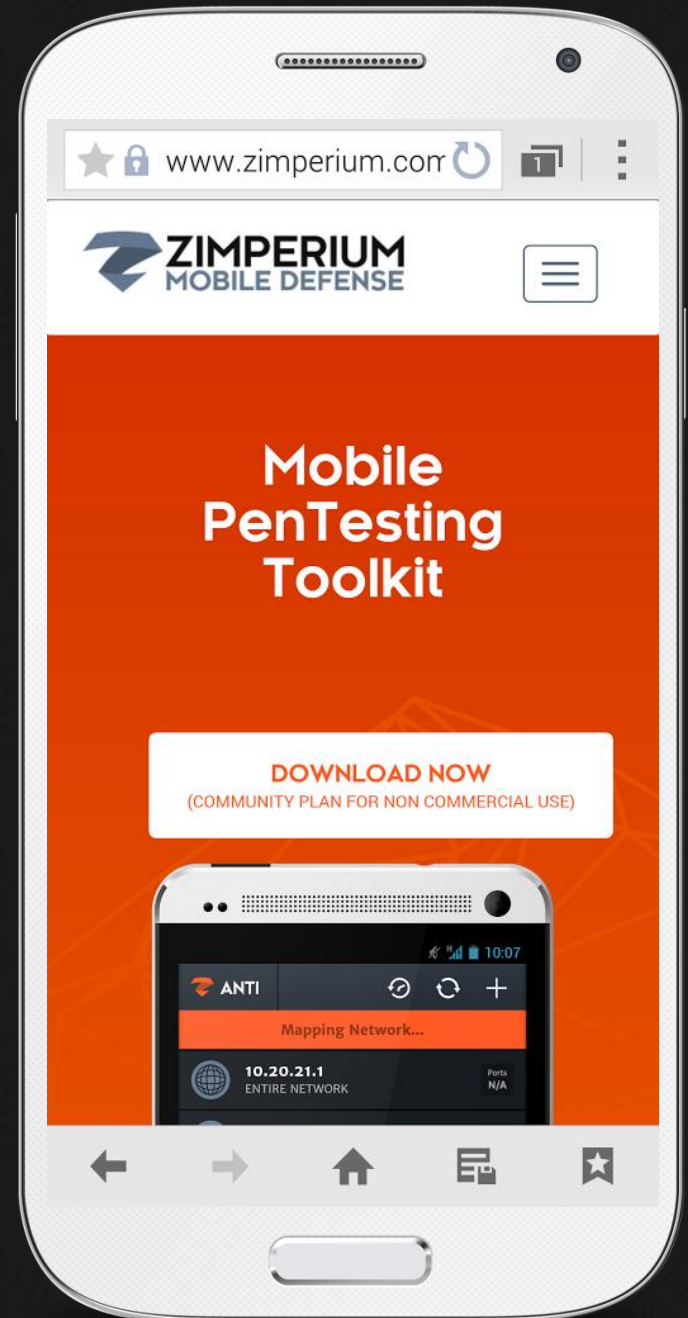

For many of zANTI's features to function, zANTI must change the SELinux configuration on your device. We put the device into "permissive" mode so that certain commands are allowed to run. Other apps running on your device could maliciously take advantage of this lessened security setting for nefarious purposes. For this and other reasons, we highly recommend that you dedicate a device to your penetration testing activities.

zANTI QUICK START GUIDE DOWNLOAD PAGE

Download zANTI.

Complete the required information

- Name
- Email

Click Download.

The image shows a smartphone screen displaying the Zimperium Mobile Defense registration form. The browser address bar shows the URL www.zimperium.com. The page header includes the Zimperium logo and a link for help. The main heading is "DOWNLOAD ZANTI". Below this are three input fields for "Name" (containing "John"), "Last Name" (containing "Doe"), and "Email" (containing "johndoe@zimperium.com"). A blue "DOWNLOAD" button is positioned below the email field. A checkbox is checked, indicating the user wants to receive updates and newsletters. The footer of the page contains the Zimperium logo, the text "ZIMPERIUM", and a copyright notice: "Copyright © 2010 - 2014 . All rights Reserved . | Terms of Use | Privacy Policy". The smartphone's home indicator bar is visible at the bottom.

zANTI INSTALLATION

Installation in Progress.

Accept Google Check.

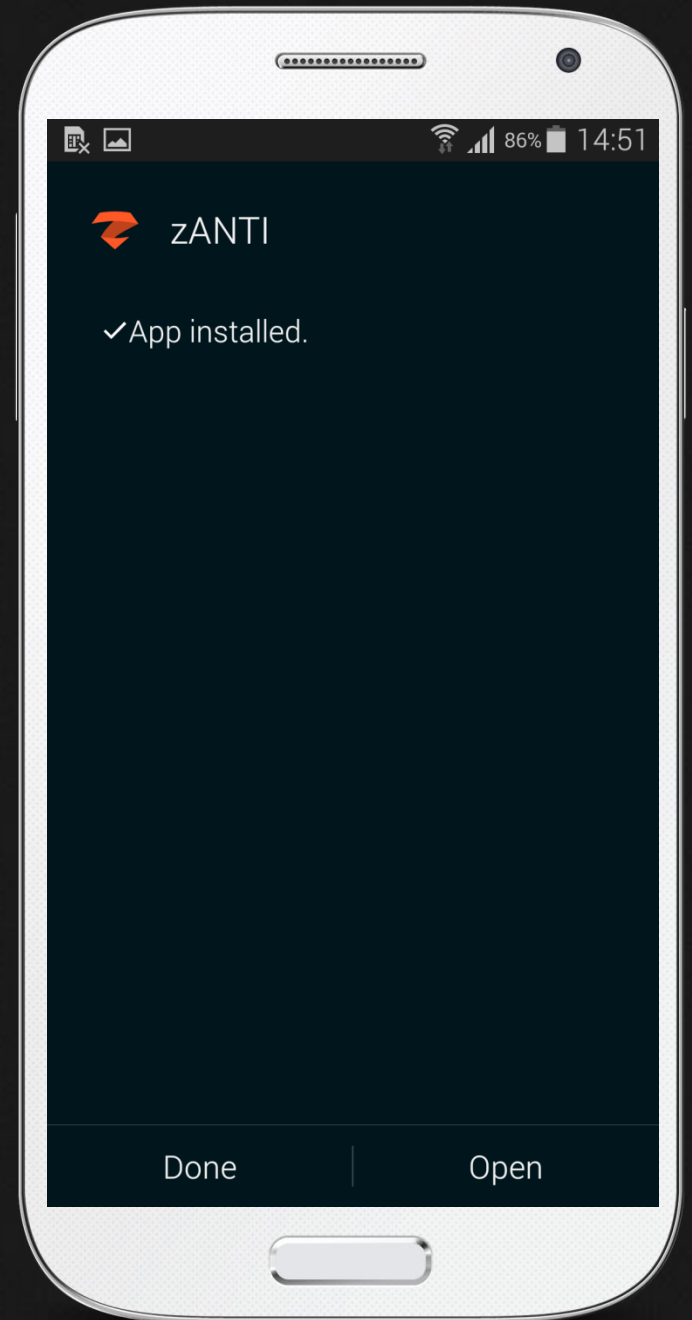

zANTI QUICK START GUIDE

zANTI INSTALLATION

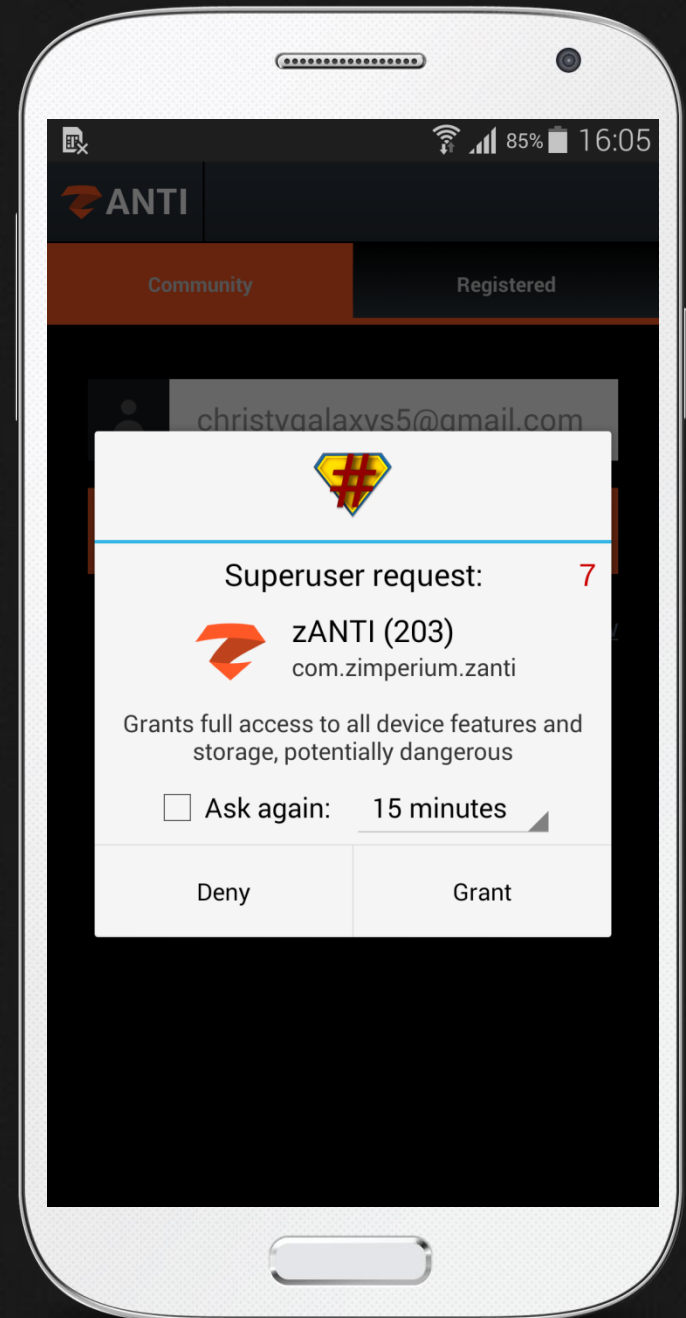

Application Installed.

Open zANTI.

Accept the ROOT PRIVILEGES to obtain fully functional zANTI.

Tap Grant.

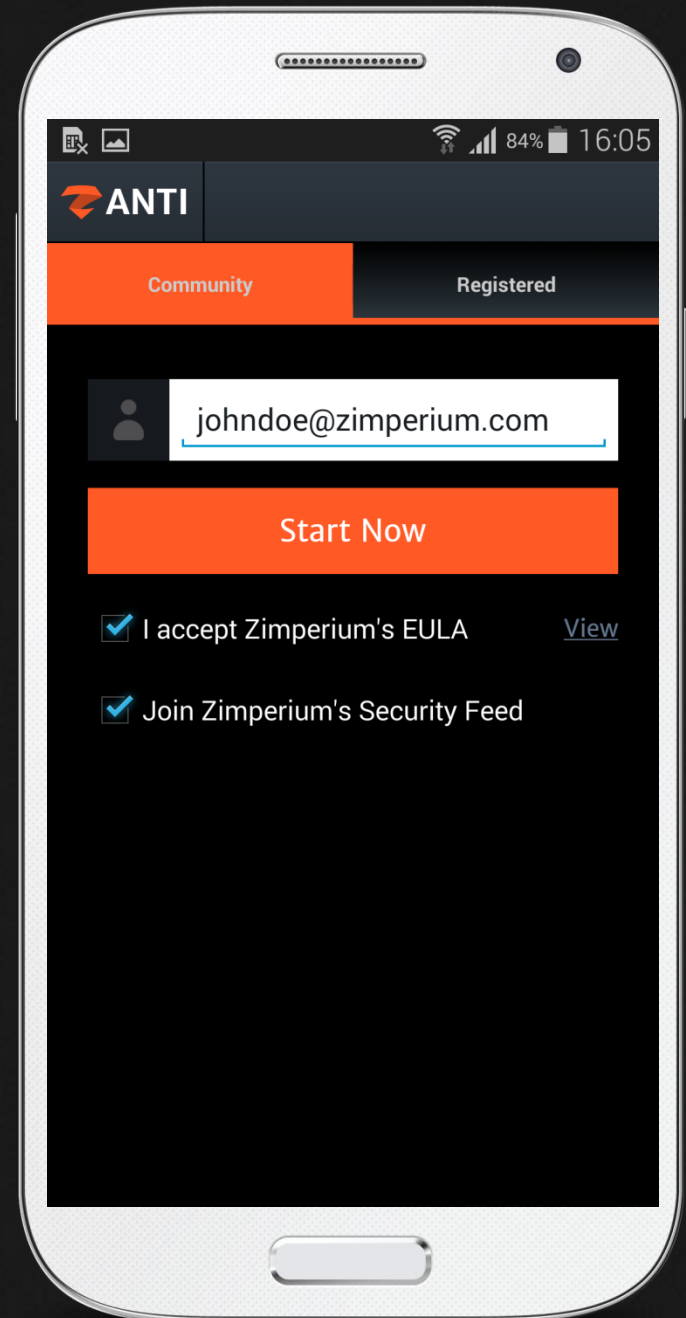

FOR COMMUNITY USERS

Input your Email Address.
Accept the EULA
Join the Security Feed.

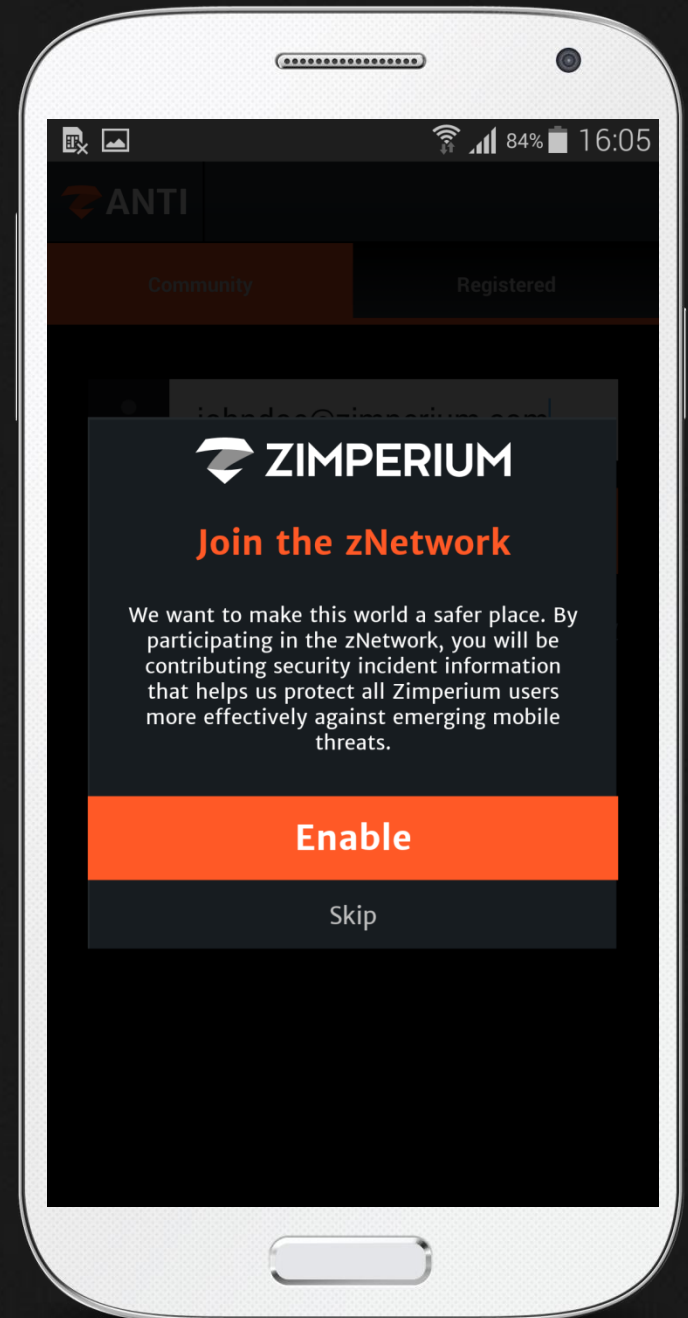

Tap Start Now.

FOR REGISTERED USERS

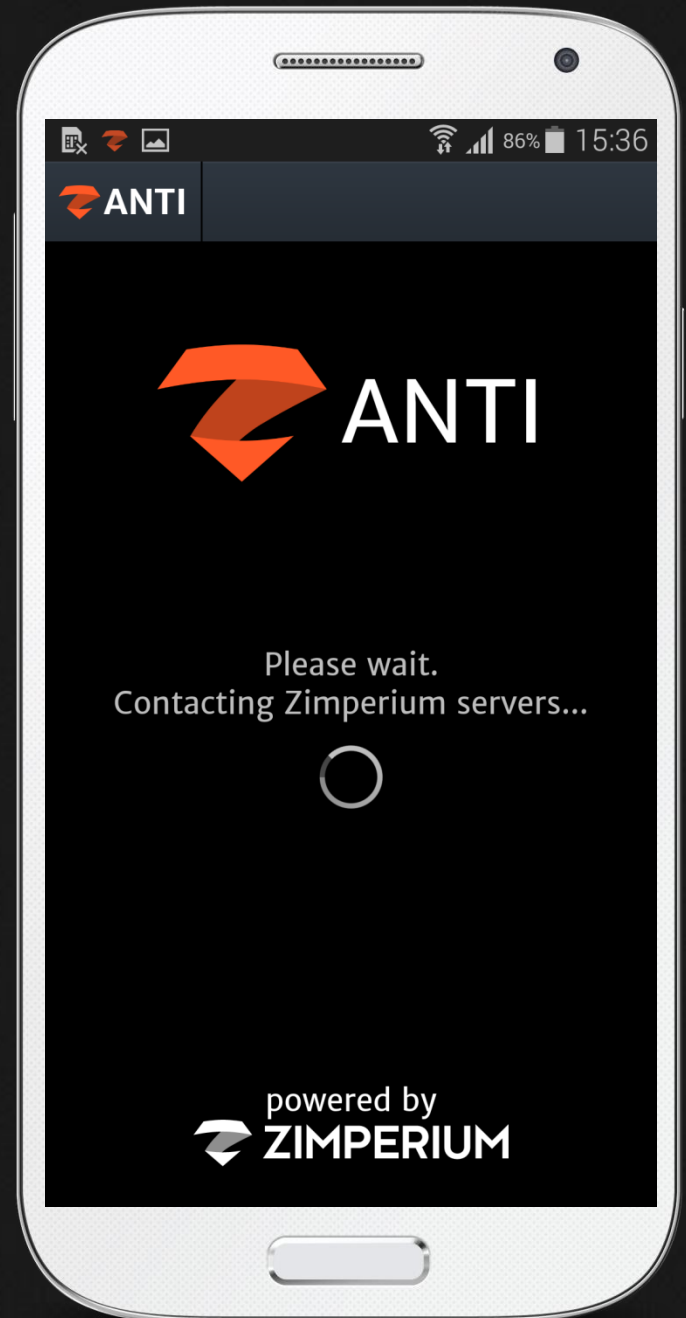

If you have purchased Zimperium Mobile Threat Defense, login with the credentials provided to you by your Zimperium Administrator.

Tap Enable to become part of the global Zimperium Threat Intelligence Network.

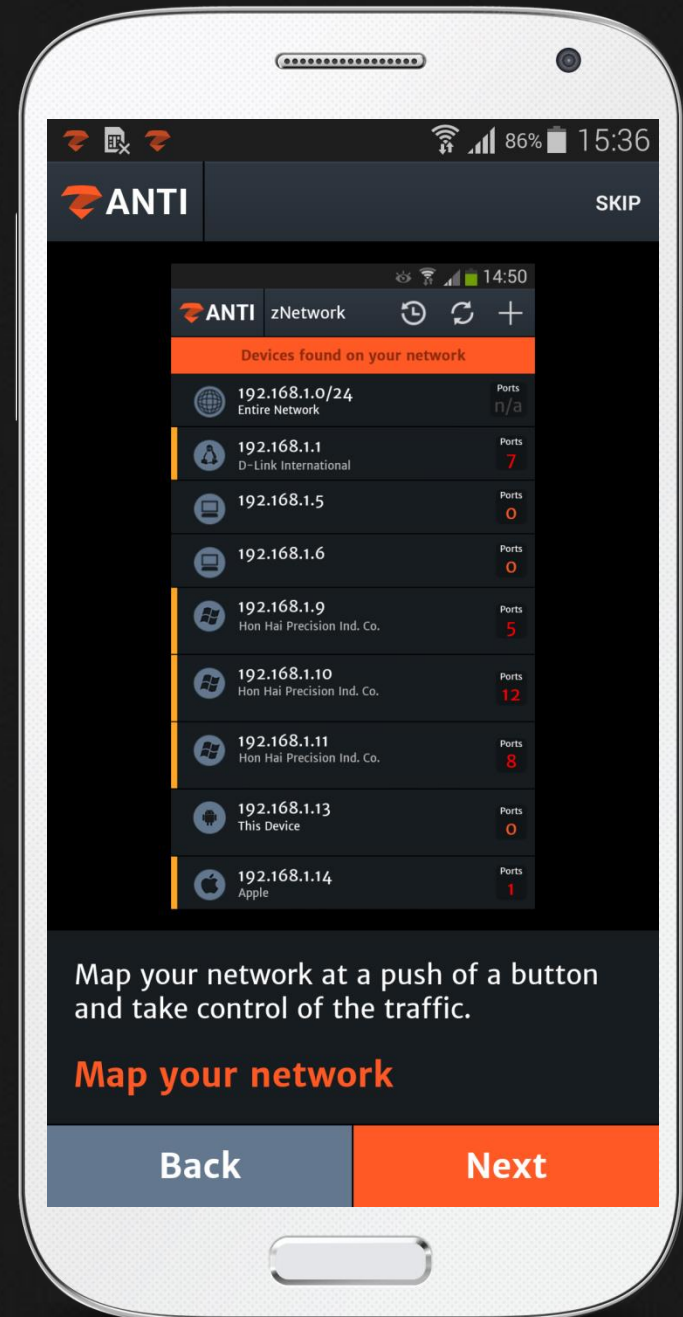

zANTI will verify your credentials by
contacting zCloud.

After successfully authenticating
zANTI will take you through a basic
tutorial.

Tap Next.

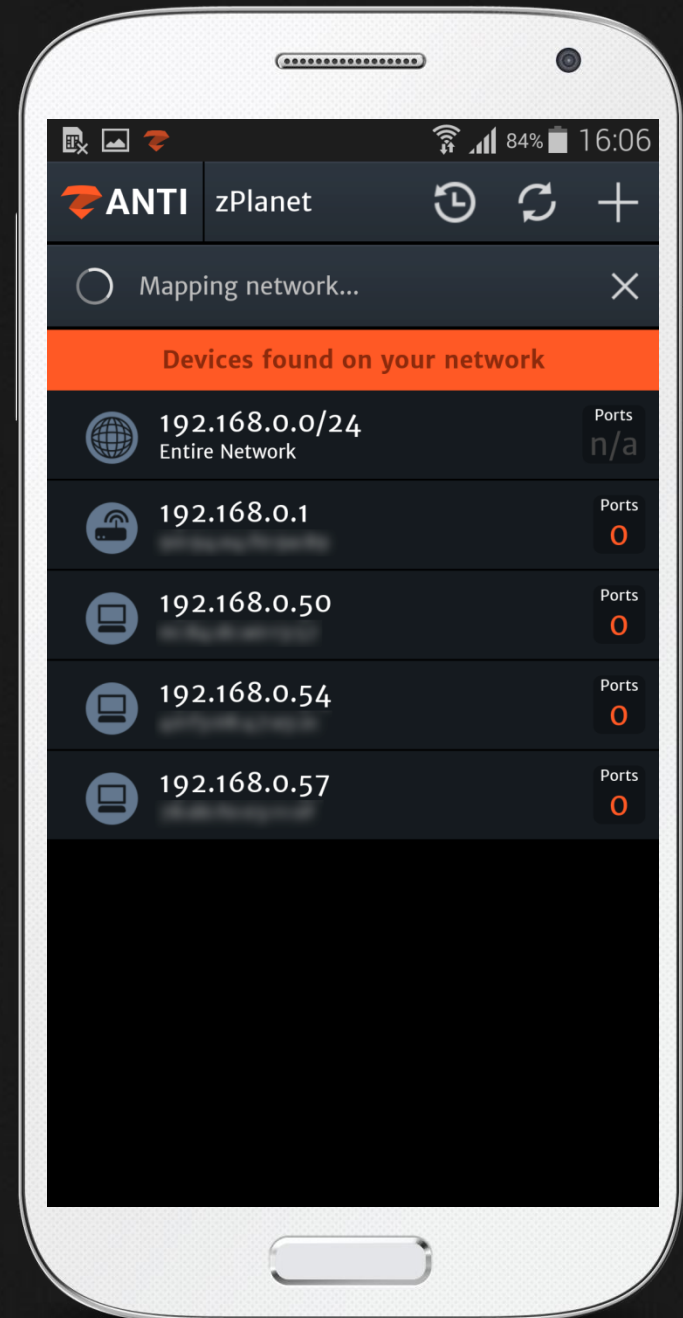

Check the box under Enable zANTI if you are fully authorized for penetration testing.

Tap Finish.

Once the installation is complete,
zANTI will auto start a network
mapping.

YOU ARE NOW PENTEST READY
